case 09/847081

Hi,

I would like to request the following interference searches: seq id 1 and 2 in the nucleic acid databases.

Thank you,

Delia M. Ramirez, Ph.D.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                             1405.

The sequences can be used to identify compounds capable of altering the expression of these genes, which are therefore useful as plant growth regulators and herbicides. They can also be used to produce transgenic plants. The present sequence is the coding sequence of a tobacco phytoene synthase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 14; Page 12-17; 44pp;

                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes a novel method of increasing the zeaxanthin and/or total carotenoid contents in transgenic plant cells, plants or other host cells or organisms (e.g. algae) by inhibiting the endogenous zeaxanthin epoxidase (ZEP) activity. The invention also discloses transgenic plant cells or plants, their harvested products, replicative material (protoplasts, calli, seeds, tubers and cuttings) and descendants, produced by the novel method. The method is used to increase production of zeaxanthin and total carotenoids (including the therapeutic antioxidant alpha-tocopherol) for food supplementation. This sequence represents a polynucleotide corresponding to the tobacco (Nicotiana tabacum) phytoene synthase (Pys) gene which is used to describe the

The phytoene synthetase coding sequence represents a cDNA of the invention. The isolated nucleic acid molecules are used for producing recombinant polypeptides or transgenic plants with enhanced ability to synthesise carotenoids. Phytoene has been used as a ultra violet absorber and other carotenoids have been used as food colours, animal feeds and in

Kumagai MH;
        This sequence encodes the phytoene synthetase from Nicotiana benthamiana. The phytoene synthetase coding sequence represents a cDNA of the invention. The isolated nucleic acid molecules are used for producing recombinant polypeptides or transgenic plants with enhanced ability to synthesise carotenoids. Phytoene has been used as a ultra violet absorber and other carotenoids have been used as food colours, animal feeds and the pharmaceutical and cosmetics industries.

New nucleic acid encoding tobacco zeta-carotene screening compounds with herbicidal activity -
                         desaturase,
                              useful
                              for
```

The present invention provides the protein and coding sequences of phytoene synthases and zeta-carotene desaturase from Nicotiana tabacum. The sequences can be used to identify compounds capable of altering the expression of these genes, which are therefore useful as plant growth regulators and herbicides. They can also be used to produce transgenic plants. The present sequence is the coding sequence of a tobacco phytoene synthase.

The phytoene synthetase coding sequence represents a cDNA of the invention. The isolated nucleic acid molecules are used for producing recombinant polypeptides or transgenic plants with enhanced ability to synthesise carotenoids heptoene has been used as a ultra violet absorber and other carotenoids have been used as food colours, animal feeds and in the pharmaceutical and cosmetics industries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DNA encoding tobacco phytoene synthase polypeptides - uproducing recombinant polypeptides or transgenic plants
